The presence of zinc ions in the culture medium enhances the process of recombinantly producing the Invention also relates to microorganism of the invention. The recombinant microorganism is used for the selective production of D-aminoacylase, which is useful in the production of high optical-purity D-form amino acids for use in the production of antibiotics and peptide drugs. The present sequence subspecies xylosoxidans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Transformed microorganism from zinc-tolerant host for selective production of D-aminoacylase, useful in synthesis of high optical-purity D-amino-acids for antibiotic side-chains and pepidrugs -
                                                                                                                                                                                                                                                                                                                                                                   GGCGCTTCTACCCGCCGCCGCCGCCGCCGCACCGAAGAGATCATCGACGTGTGCCGG

                                                                                                                                                                                      The present sequence encodes an aminocyclase enzyme. The enzyme is capable of hydrolysing N-acetyl-D-tryptophan at a substrate concentration of 10 grams per litre, and exhibiting faster convers of R-N-acetyl-2-thienylalanine than of R-N-acetyl-2-thienylalanine than of R-N-acetyl-4-chlorophenylalanine. The enzyme can be used for the preparation of a D-amino acid by conversion of a corresponding D-N-acylamino acid. It can also be used for resolving a racemic mixture of N-acylamino acids and deprotecting optically-enriched the production of various pesticides, antibiotics and other
                                                                                                                                                                                                                                                                                                          New isolated D-amino acylase enzyme, useful for the preparation D-amino acids for use as intermediates in the preparation of pesticides, antibiotics and other pharmaceuticals
                                                                                                                                                                    Sequence 1473 BP;

The specification describes antisense oligonucleotides (AAX52869-X55271) directed against at least 2 mRNAs selected from target genes, coding and non-coding regions of RNAs corresponding to target genes, gene initiation codons, genomic flanking regions, intron-exon borders, the regions and all segments of RNAs exection between coding and non-coding or more diseases, conditions or mixtures. The antisense oligonucleotides (specifically AAX55272-74. These multiple target antisense treatment of diseases and conditions. Typical diseases and inflammation, including lung diseases, pulmonary vasoconstriction, including lung diseases, pulmonary vasoconstriction, impedeed antisense conditions.
                                                                                                                                                                                                                  Disclosure; Page 37; 120pp; English.

                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                          lupus erythematosus, hypertension, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and diseases, rheumatoid stresses, autoimmune disorders such as multiple scierosis, rheumatoid arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. OREX proteins are also meefin for the third inflammatory eye disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                             (referred to as open reading frame, ORFX, where X is 1-11491 [See Table in the specification). ABM15762 to ABM27252 encode the human ORFX proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating syndrome associated with ORFX-associated disorder. ORFX polynucleotide sequences can be used in gene therapy. ORFX sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrbosis of liver, osteoarthritis, neurodegenerative disorders, disorders related to organ representatives.
                                                                                                                         Sequence 312 BP; 62 A; 92 C; 105 G; 52 T; 1 other;
                                                                                                                                                                                  N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                 reperfusion injury in various tissues and conditions resulting systemic cytokine damage.
                                                                                                                                                                                                                                                               useful for treating burns, incisions, ulcers, for treating osteoporosis bone degenerative disorders, or periodontal disease, and for gut protection or regeneration and treatment of lung or liver fibrosis,
